accessories

LAND ROVER SERIES 2a & 3

This section includes our range of Accessories suitable for the Land Rover Series 2a and 3. We also include accessories which suit popular modifications to Series vehicles - so don't think it's a mistake if you see something that doesn't usually fit original vehicles, because you can bet that someone has a modified vehicle it will fit.

You'll also see some items are photographed on other Land Rover vehicles - this is simply because we didn't have a Series vehicle to hand when the photographer called in - so just make sure you use the right reference number when ordering or check with one of our expert staff who will be able to advise on correct fitment.

PARTS: Bearmach produces vehicle-specific catalogues listing our vast range of parts suitable for all Land Rover vehicles - make sure you get the latest edition for your particular vehicle.

NOTE: Manufacturers parts numbers are used for reference purposes only.

Certificate No. RS20282

The original Land Rover rolled off the Solihull production line in 1948 and enjoyed great success through the 1950s. The launch of the Series II in 1958 further established the marque's reputation for durability and practicality. It was given a new larger petrol engine, synchromesh was added to 3rd and 4th gears and the bodywork got the shape we are so familiar with today.

1961 saw the introduction of the Series IIa with not many significant changes other than the diesel engine getting bored out to 2.25Lt. A 12 seat Station Wagon version was launched in 1962 which led to the demise of the 10 seat 107" model.

A 6 cylinder 2.6Lt petrol option was the next major change introduced in 1967 together with a re-designed dashboard. Export models had the headlamps moved from the grille to the wings in 1968 - a feature added to UK models in 1969. Also in 1968 we got the "1 Ton" Land Rover which was given heavy duty transmission and lower gear ratios to aid with towing and to improve off-road capabilities.

The Series IIa models continued to evolve through the 1960s and many variations of wheelbase and body style were developed to increase Land Rover's flexibility to suit a wide range of markets from military to agricultural and emergency services.

This programme culminated with the introduction of Series III in 1971 - not a complete revamp but with significant changes to the gearbox, clutch and braking systems. The Salisbury rear axle became standard fitment to 109" vehicles from 1972 and the electrical system was upgraded with an alternator replacing the old dynamo.

The Series III bodywork remained almost unchanged although the metal grille was replaced with a plastic one. Inside, the dashboard was now padded and the instrumentation moved in front of the driver; door interiors were upholstered, an improved heater was added and even a radio was available as an option.

Series IIIs were produced through to 1985, overlapping the production of Defenders which started in 1983 - but that's another story...

SPECIAL PERFORMANCE EQUIPMENT — AXLE & STEERING

DETROIT DIFF LOCKER*

The Detroit Locker is a fully automatic locking traction differential that is well known for premium performance and dependable operation. Preload devices between the side gears deliver 100% torque and power to both drive wheels yet unlock automatically to permit necessary wheel speed differentiation. The Detroit Locker is trouble-free as it does not require service adjustments or special lubricants. Easy to install, no special tools or case modifications required. One year Limited Warranty.

BA 207 To suit Rover Differential. 10 spline, Locker (inc. Carrier)

DETROIT TRUE TRAC*

This unit features a gear-type limited slip design (no clutch or friction plates to wear out). Its positive gear action automatically splits the torque with none of the steering problems associated with other traction 'diffs'. Power transfer is so smooth that it is unnoticeable through the steering wheel when fitted in front drive steering axles. It performs as a standard differential on normal highway driving – then automatically engages when needed in wet, muddy or icy conditions. Includes carrier Bearings.

Truetrac Diff Locker

BA 209 to suit Rover Differential (10 spline – Rear)
BA 209F to suit Rover Differential (10 spline – Front)

A.R.B. AIR LOCKER DIFFS*

A manually lockable differential which is operated at the driver's discretion by the push of a button. Locking and unlocking of the 'diff' is extremely rapid and can be achieved at any vehicle speed.

Installation involves bolt in replacement of the original equipment differential centre, an air compressor and in-vehicle switch. Can be fitted to both front and rear axles without compromising on-road performance.

BA 205 To suit Rover Differential. 10 spline

NOTE: All A.R.B. Diff Lockers require compressor which is available separately, order ref: – **BA 215**

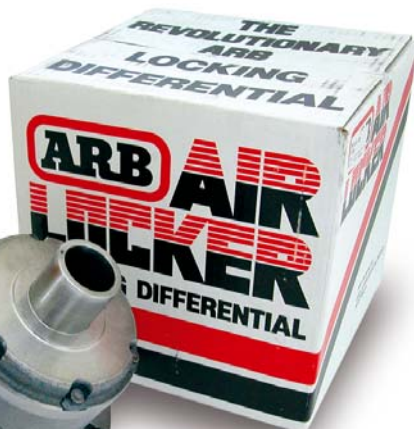

* NOTE

For fitment to 4:7:1 Ratio diffs a spacer ring and bearing collars are required for all the above items.

DIFF LOCK SPACER RING

Required to allow fitment of above Diff Locks on vehicles with a 4:7:1 ratio diffs. Includes extended bolts to suit relevant vehicles.

BA 205S Spacer Ring
